

SharePoint 2010 Developer Core Skills

Course Length: 5 days

Price: \$3,000

Summary

Microsoft SharePoint 2007 provides a huge range of functionality including enterprise content management, automation of business processes, and business intelligence and reporting. Although SharePoint is rich in features and capabilities, it involves common concepts and developer tasks that are universal to every type of SharePoint project. This course is designed to provide those who are responsible for customizing and creating new functionality within the platform mastery of these common tasks, including: customization of look and feel through styles, themes, and master pages, controls and web parts, custom pages, creation and deployment of solutions, security, debugging, workflows, custom site definitions, lists, documents libraries, and features. Students who master the contents of this course will possess the knowledge to productively contribute on most types of SharePoint implementation because they will understand the tasks and building blocks required in all types of custom solutions.

Who Should Attend?

SharePoint is built on ASP .Net 2.0 but includes a variety of extensions that are unique to SharePoint. Basic knowledge of web technologies including HTML, CSS, and XML are required. A good understanding of ASP .Net architecture is beneficial but not necessary.

Course Outline

Introduction to SharePoint Development

- Modes of Development
 - Configuration and Customization
 - Solution Development

Site Columns and Content Types

- Site Columns
- Content Types
- Integrating Site Columns, Content Types, and Lists
- Using Calendar and Contacts Lists with Outlook 2007

Extending Lists with Office 2007
